**BENZ[*g*]INDAZOLYL DERIVATIVES
FOR THE TREATMENT OF INFLAMMATION**

5 **FIELD OF THE INVENTION**

This invention is in the field of antiinflammatory pharmaceutical agents and specifically relates to compounds, compositions and methods for treating inflammation and inflammation-associated disorders, 10 such as arthritis.

BACKGROUND OF THE INVENTION

Prostaglandins play a major role in the 15 inflammation process and the inhibition of prostaglandin production, especially production of PGG₂, PGH₂ and PGE₂, has been a common target of antiinflammatory drug discovery. However, common non-steroidal antiinflammatory drugs (NSAIDs) that are 20 active in reducing the prostaglandin-induced pain and swelling associated with the inflammation process are also active in affecting other prostaglandin-regulated processes not associated with the inflammation process. Thus, use of high doses of most common NSAIDs can 25 produce severe side effects, including life threatening ulcers, that limit their therapeutic potential. An alternative to NSAIDs is the use of corticosteroids, which have even more drastic side effects, especially when long term therapy is involved.

30 Previous NSAIDs have been found to prevent the production of prostaglandins by inhibiting enzymes in the human arachidonic acid/prostaglandin pathway, including the enzyme cyclooxygenase (COX). The recent discovery of an inducible enzyme associated with inflammation (named 35 "cyclooxygenase-2 (COX-2)" or "prostaglandin G/H synthase II") provides a viable target of inhibition which more effectively reduces inflammation and produces fewer and less drastic side effects.

The novel compounds described herein are such safe and also effective antiinflammatory agents. The invention compounds are found to show usefulness in vivo as antiinflammatory agents with minimal side effects.

5 The compounds described herein preferably selectively inhibit cyclooxygenase-2 over cyclooxygenase-1.

Substituted pyrazoles having antiinflammatory activity are described in copending applications 08/160,594 and 08/160,553.

10 Fused tricyclic pyrazoles having a saturated ring
bridging the pyrazole and a phenyl radical have been
previously described as HMG-CoA reductase inhibitors in
U.S. Patent Nos. 5,134,155 and 5,315,012. Tricyclic
pyrazoles have been previously described as antibiotics
15 by M. Hashem et al. [J. Med. Chem., 19, 229 (1976)].

Tricyclic benz[g]indazoles and 4,5-dihydrobenz[g]indazoles are described as antiinflammatory agents in U.S. Patent No. 3,940,418.

R. Hamilton [J. Heterocyclic Chem., 13, 545 (1976)]

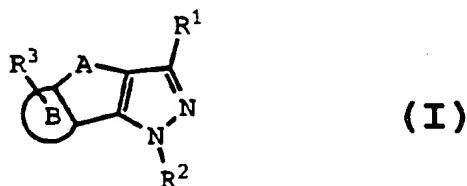

20 describes tricyclic benz[g]indazoles and 4,5-dihydrobenz[g]indazoles as antiinflammatory agents. Specifically, [7-chloro-1-phenyl-1H-benz[g]indazol-3-yl]carboxylic acid and methyl (7-chloro-1-phenyl-1H-benz[g]indazol-3-yl)carboxylate are described.

25 The invention's unsaturated benz[g]indazolyl derivatives are found to show usefulness *in vivo* as antiinflammatory agents with minimal side effects.

DESCRIPTION OF THE INVENTION

30

A class of compounds useful in treating inflammation-related disorders is defined by Formula I:

wherein A is $-(\text{CH}_2)_m-\text{CH}=\text{CH}- (\text{CH}_2)_n-$;

wherein m is 0 or 1;

wherein n is 0 or 1;

5 wherein B is selected from aryl and heteroaryl;

wherein R¹ is selected from hydrido, halo, haloalkyl, cyano, nitro, formyl, alkoxy carbonyl, carboxyl, carboxyalkyl, alkoxy carbonylalkyl, amidino, cyanoamidino, aminocarbonyl, alkoxy, alkoxyalkyl, 10 aminocarbonylalkyl, N-monoalkylaminocarbonyl, N-arylamino carbonyl, N,N-dialkylaminocarbonyl, N-alkyl-N-arylamino carbonyl, alkylcarbonyl, alkylcarbonylalkyl, hydroxyalkyl, alkylthio, alkylsulfinyl, alkylsulfonyl, alkylthioalkyl, alkylsulfinylalkyl, alkylsulfonylalkyl, 15 N-alkylaminosulfonyl, N-arylamino sulfonyl, arylsulfonyl, N,N-dialkylaminosulfonyl, N-alkyl-N-arylamino sulfonyl and heterocyclic;

wherein R² is selected from aryl and heteroaryl, wherein R² is optionally substituted at a substitutable 20 position with one or more radicals selected from alkylsulfonyl, aminosulfonyl, halo, alkyl, alkoxy, hydroxyl and haloalkyl; and

wherein R³ is one or more radicals selected from hydrido, halo, alkylthio, alkylsulfinyl, alkyl, 25 alkylsulfonyl, cyano, carboxyl, alkoxy carbonyl, aminocarbonyl, N-monoalkylaminocarbonyl, N-arylamino carbonyl, N,N-dialkylaminocarbonyl, N-alkyl-N-arylamino carbonyl, haloalkyl, hydroxyl, alkoxy, hydroxyalkyl, haloalkoxy, aminosulfonyl, N- 30 alkylaminosulfonyl, amino, N-alkylamino, N,N-dialkylamino, heterocyclic, nitro and acylamino; provided R² is substituted when R³ is halo; or a pharmaceutically-acceptable salt thereof.

Compounds of Formula I would be useful for, but not 35 limited to, the treatment of inflammation in a subject, and for treatment of other inflammation-associated disorders, such as, as an analgesic in the treatment of

pain and headaches, or as an antipyretic for the treatment of fever. For example, compounds of the invention would be useful to treat arthritis, including but not limited to rheumatoid arthritis,

5 spondyloarthropathies, gouty arthritis, osteoarthritis, systemic lupus erythematosus and juvenile arthritis. Such compounds of the invention would be useful in the treatment of asthma, bronchitis, menstrual cramps, tendinitis, bursitis, and skin related conditions such as

10 psoriasis, eczema, burns and dermatitis. Compounds of the invention also would be useful to treat gastrointestinal conditions such as inflammatory bowel disease, Crohn's disease, gastritis, irritable bowel syndrome and ulcerative colitis and for the prevention of colorectal

15 cancer. Compounds of the invention would be useful in treating inflammation in such diseases as vascular diseases, migraine headaches, periarteritis nodosa, thyroiditis, aplastic anemia, Hodgkin's disease, sclerodoma, rheumatic fever, type I diabetes, myasthenia

20 gravis, multiple sclerosis, sarcoidosis, nephrotic syndrome, Behcet's syndrome, polymyositis, gingivitis, cystic fibrosis, hypersensitivity, conjunctivitis, swelling occurring after injury, myocardial ischemia, and the like. The compounds also would be useful in the

25 treatment of ophthalmic diseases such as retinitis, retinopathies, uveitis, and of acute injury to the eye tissue. The compounds also would be useful for the treatment of certain central nervous system disorders such as alzheimers disease and dementia. The compounds of

30 the invention are useful as anti-inflammatory agents, such as for the treatment of arthritis, with the additional benefit of having significantly less harmful side effects. These compounds also would be useful in the treatment of allergic rhinitis, respiratory distress

35 syndrome, endotoxin shock syndrome, atherosclerosis and central nervous system damage resulting from stroke, ischemia and trauma.

Besides being useful for human treatment, these compounds are also useful for treatment of mammals, including horses, dogs, cats, rats, mice, sheep, and pigs, and of birds.

5 The present compounds may also be used in co-therapies, partially or completely, in place of other conventional antiinflammatories, such as together with steroids, NSAIDs, 5-lipoxygenase inhibitors, LTB₄ antagonists and LTA₄ hydrolase inhibitors.

10 Suitable LTB₄ inhibitors include, among others, ebselen, Bayer Bay-x-1005, Ciba Geigy compound CGS-25019C, Leo Denmark compound ETH-615, Lilly compound LY-293111, Ono compound ONO-4057, Terumo compound TMK-688, Lilly compounds LY-213024, 264086 and 292728, ONO
15 compound ONO-LB457, Searle compound SC-53228, calcitrol, Lilly compounds LY-210073, LY223982, LY233469, and LY255283, ONO compound ONO-LB-448, Searle compounds SC-41930, SC-50605 and SC-51146, and SK&F compound SKF-104493. Preferably, the LTB₄ inhibitors are selected from
20 ebselen, Bayer Bay-x-1005, Ciba Geigy compound CGS-25019C, Leo Denmark compound ETH-615, Lilly compound LY-293111, Ono compound ONO-4057, and Terumo compound TMK-688.

25 Suitable 5-LO inhibitors include, among others, masoprolol, tenidap, zileuton, pranlukast, tepronalin, rilopirox, flezelastine hydrochloride, enazadrem phosphate, and bunaprolast.

30 The present invention preferably includes compounds which selectively inhibit cyclooxygenase-2 over cyclooxygenase-1. Preferably, the compounds have a cyclooxygenase-2 IC₅₀ of less than about 0.2 μ M, and also have a selectivity ratio of cyclooxygenase-2 inhibition over cyclooxygenase-1 inhibition of at least 50, and more preferably of at least 100. Even more preferably, the
35 compounds have a cyclooxygenase-1 IC₅₀ of greater than about 1 μ M, and more preferably of greater than 10 μ M. Such preferred selectivity may indicate an ability to

reduce the incidence of common NSAID-induced side effects.

A preferred class of compounds consists of those compounds of Formula I wherein A is $-(CH_2)_m-CH=CH-(CH_2)_n-$;

5 wherein B is selected from aryl, and five-six membered heteroaryl; wherein m is 0 or 1; wherein n is 0 or 1; wherein R¹ is selected from halo, lower haloalkyl, cyano, nitro, formyl, lower alkoxy carbonyl, lower carboxyalkyl, lower alkoxy carbonylalkyl, amidino, cyanoamidino, lower 10 alkoxy, lower alkoxyalkyl, lower aminocarbonylalkyl, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower alkylcarbonyl, lower alkylcarbonylalkyl, lower hydroxyalkyl, lower alkylthio, 15 lower alkylsulfinyl, lower alkylsulfonyl, lower alkylthioalkyl, lower alkylsulfinylalkyl, lower alkylsulfonylalkyl, lower N-alkylaminosulfonyl, N-phenylaminosulfonyl, phenylsulfonyl, lower N,N-dialkylaminosulfonyl, lower N-alkyl-N-phenylaminosulfonyl 20 and five-seven membered heterocyclic; wherein R² is selected from phenyl and five-six membered heteroaryl, wherein R² is optionally substituted at a substitutable position with one or more radicals selected from lower alkylsulfonyl, aminosulfonyl, halo, lower alkyl, lower 25 alkoxy, hydroxyl and lower haloalkyl; and wherein R³ is one or more radicals selected from halo, lower alkylthio, lower alkylsulfinyl, lower alkyl, lower alkylsulfonyl, cyano, carboxyl, lower alkoxy carbonyl, aminocarbonyl, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, 30 lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower haloalkyl, hydroxyl, lower alkoxy, lower hydroxyalkyl, lower haloalkoxy, aminosulfonyl, lower N-alkylaminosulfonyl, amino, lower N-alkylamino, lower N,N-dialkylamino, five-seven membered 35 heterocyclic, nitro and acylamino; or a pharmaceutically-acceptable salt thereof.

A more preferred class of compounds consists of those compounds of Formula I wherein A is $-\text{CH}=\text{CH}-$; wherein B is selected from aryl and six membered heteroaryl; wherein R¹ is selected from halo, lower 5 haloalkyl, cyano, nitro, formyl, lower alkoxy carbonyl, lower carboxyalkyl, lower alkoxy, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower alkylcarbonyl and lower 10 hydroxyalkyl; wherein R² is phenyl optionally substituted at a substitutable position with one or more radicals selected from lower alkylsulfonyl and aminosulfonyl; and wherein R³ is one or more radicals selected from halo, lower alkylthio, lower alkylsulfinyl, lower alkyl, lower 15 alkylsulfonyl, cyano, carboxyl, lower alkoxy carbonyl, aminocarbonyl, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower haloalkyl, hydroxyl, lower alkoxy, lower hydroxyalkyl, lower 20 haloalkoxy, amino, lower N-alkylamino, lower N,N-dialkylamino, nitro and acylamino; or a pharmaceutically-acceptable salt thereof.

An even more preferred class of compounds consists of those compounds of Formula I wherein A is $-\text{CH}=\text{CH}-$; wherein B is phenyl or pyridyl; wherein R¹ is selected 25 from lower haloalkyl, cyano, lower alkoxy carbonyl, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl and lower N-alkyl-N-phenylaminocarbonyl; wherein R² is phenyl optionally 30 substituted at a substitutable position with a radical selected from lower alkylsulfonyl and aminosulfonyl; and wherein R³ is one or more radicals selected from halo, lower alkylthio, lower alkylsulfinyl, lower alkyl, cyano, lower alkoxy carbonyl, aminocarbonyl, lower N-35 monoalkylaminocarbonyl, lower haloalkyl, hydroxyl, lower alkoxy, lower hydroxyalkyl, lower haloalkoxy, amino,

lower N,N-dialkylamino and nitro; or a pharmaceutically-acceptable salt thereof.

A class of compounds of particular interest consists of those compounds of Formula I wherein A is -CH=CH-;

5 wherein B is phenyl or pyridyl; wherein R¹ is selected from fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, pentafluoroethyl, heptafluoropropyl, difluorochloromethyl, dichlorofluoromethyl,

10 difluoroethyl, difluoropropyl, dichloroethyl, dichloropropyl, cyano, methoxycarbonyl, ethoxycarbonyl, isopropoxycarbonyl, tert-butoxycarbonyl, propoxycarbonyl, butoxycarbonyl, isobutoxycarbonyl, pentoxy carbonyl, N-methylaminocarbonyl, N-phenylaminocarbonyl, N,N-

15 dimethylaminocarbonyl and N-methyl-N-phenylaminocarbonyl; wherein R² is phenyl optionally substituted at a substitutable position with methylsulfonyl or aminosulfonyl; and wherein R³ is one or more radicals selected from fluoro, chloro, bromo, methylthio, ethylthio, isopropylthio, tert-butylthio, isobutylthio, hexylthio, methylsulfinyl, ethylsulfinyl, isopropylsulfinyl, tert-buty lsulfinyl, isobutylsulfinyl, hexylsulfinyl, methyl, ethyl, isopropyl, tert-butyl, isobutyl, hexyl, cyano, methoxycarbonyl, ethoxycarbonyl,

20 isopropoxycarbonyl, tert-butoxycarbonyl, propoxycarbonyl, butoxycarbonyl, isobutoxycarbonyl, pentoxy carbonyl, aminocarbonyl, N-methylaminocarbonyl, fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, pentafluoroethyl,

25 heptafluoropropyl, difluorochloromethyl, dichlorofluoromethyl, difluoroethyl, difluoropropyl, dichloroethyl, dichloropropyl, hydroxyl, methoxy, methylenedioxy, ethoxy, propoxy, n-butoxy, hydroxymethyl, trifluoromethoxy, amino, N,N-dimethylamino and nitro; or

30 a pharmaceutically-acceptable salt thereof.

A family of specific compounds of particular interest within Formula I consists of compounds and pharmaceutically-acceptable salts thereof as follows:

5 4-[6-chloro-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide;
[1-(4-aminosulfonylphenyl)-6-chloro-7-methoxy-1H-
benz[g]indazol-3-yl]carbonitrile;
methyl [1-(4-aminosulfonylphenyl)-6-chloro-7-methoxy-
10 1H-benz[g]indazol-3-yl]carboxylate;
ethyl [1-(4-aminosulfonylphenyl)-6-chloro-7-methoxy-
1H-benz[g]indazol-3-yl]carboxylate;
N-methyl [1-(4-aminosulfonylphenyl)-6-chloro-7-
methoxy-1H-benz[g]indazol-3-yl]carboxamide;
15 6-chloro-7-methoxy-1-(4-methylsulfonylphenyl)-1H-
benz[g]indazole;
[1-(4-methylsulfonylphenyl)-6-chloro-7-methoxy-1H-
benz[g]indazol-3-yl]carbonitrile;
methyl [1-(4-methylsulfonylphenyl)-6-chloro-7-
20 methoxy-1H-benz[g]indazol-3-yl]carboxylate;
ethyl [1-(4-methylsulfonylphenyl)-6-chloro-7-methoxy-
1H-benz[g]indazol-3-yl]carboxylate;
N-methyl [1-(4-methylsulfonylphenyl)-6-chloro-7-
methoxy-1H-benz[g]indazol-3-yl]carboxamide;
25 [1-(4-methylsulfonylphenyl)-3-(difluoromethyl)-1H-
benz[g]indazol-7-yl]carboxylic acid;
methyl [1-(4-methylsulfonylphenyl)-3-
(difluoromethyl)-1H-benz[g]indazol-7-
yl]carboxylate;
30 [1-(4-methylsulfonylphenyl)-3-(difluoromethyl)-1H-
benz[g]indazol-7-yl]carbonitrile;

30 4-[7-methylsulfinyl-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide;

4-[6-chloro-7-methylsulfinyl-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide; and

35 4-[6-chloro-7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide.

Within Formula I there is a subclass of compounds of high interest represented by Formula II:

5

wherein R¹ is hydrido or haloalkyl; and wherein R³ is one or more radicals selected from alkyl, alkoxy and halo; or a pharmaceutically-acceptable salt thereof.

A preferred class of compounds consists of those 10 compounds of Formula II wherein R¹ is hydrido or lower haloalkyl; and wherein R³ is one or more radicals selected from lower alkyl, lower alkoxy and halo; or a pharmaceutically-acceptable salt thereof.

A class of compounds of particular interest consists 15 of those compounds of Formula II wherein R¹ is selected from hydrido, fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, pentafluoroethyl, heptafluoropropyl, difluorochloromethyl, dichlorofluoromethyl, 20 difluoroethyl, difluoropropyl, dichloroethyl and dichloropropyl; and wherein R³ is one or more radicals selected from fluoro, chloro, bromo, methyl, ethyl, methoxy, methylenedioxy, ethoxy, propoxy, n-butoxy and tert-butoxy; or a pharmaceutically-acceptable salt 25 thereof.

The term "hydrido" denotes a single hydrogen atom (H). This hydrido radical may be attached, for example, to an oxygen atom to form a hydroxyl radical or two hydrido radicals may be attached to a carbon atom to 30 form a methylene (-CH₂-) radical. Where used, either

alone or within other terms such as "haloalkyl", "alkylsulfonyl", "alkoxyalkyl" and "hydroxyalkyl", the term "alkyl" embraces linear or branched radicals having one to about twenty carbon atoms or, preferably, one to 5 about twelve carbon atoms. More preferred alkyl radicals are "lower alkyl" radicals having one to about ten carbon atoms. Most preferred are lower alkyl radicals having one to about six carbon atoms. Examples of such radicals include methyl, ethyl, n-propyl, isopropyl, n- 10 butyl, isobutyl, sec-butyl, tert-butyl, pentyl, iso-amyl, hexyl and the like. The term "halo" means halogens such as fluorine, chlorine, bromine or iodine. The term "haloalkyl" embraces radicals wherein any one or more of the alkyl carbon atoms is substituted with halo as 15 defined above. Specifically embraced are monohaloalkyl, dihaloalkyl and polyhaloalkyl radicals. A monohaloalkyl radical, for one example, may have either an iodo, bromo, chloro or fluoro atom within the radical. Dihalo and polyhaloalkyl radicals may have two or more of the 20 same halo atoms or a combination of different halo radicals. "Lower haloalkyl" embraces radicals having 1-6 carbon atoms. Examples of haloalkyl radicals include fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, 25 trichloromethyl, pentafluoroethyl, heptafluoropropyl, difluorochloromethyl, dichlorofluoromethyl, difluoroethyl, difluoropropyl, dichloroethyl and dichloropropyl. The term "hydroxyalkyl" embraces linear or branched alkyl radicals having one to about ten 30 carbon atoms any one of which may be substituted with one or more hydroxyl radicals. More preferred hydroxyalkyl radicals are "lower hydroxyalkyl" radicals having one to six carbon atoms and one or more hydroxyl radicals. Examples of such radicals include 35 hydroxymethyl, hydroxyethyl, hydroxypropyl, hydroxybutyl and hydroxyhexyl. The terms "alkoxy" and "alkoxyalkyl" embrace linear or branched oxy-containing radicals each

having alkyl portions of one to about ten carbon atoms. More preferred alkoxy radicals are "lower alkoxy" radicals having one to six carbon atoms. Examples of such radicals include methoxy, ethoxy, propoxy, butoxy and tert-butoxy. The term "alkoxyalkyl" embraces alkyl radicals having one or more alkoxy radicals attached to the alkyl radical, that is, to form monoalkoxyalkyl and dialkoxyalkyl radicals. More preferred alkoxyalkyl radicals are "lower alkoxyalkyl" radicals having one to six carbon atoms and one or two alkoxy radicals. Examples of such radicals include methoxymethyl, methoxyethyl, ethoxyethyl, methoxybutyl and methoxypropyl. The "alkoxy" or "alkoxyalkyl" radicals may be further substituted with one or more halo atoms, such as fluoro, chloro or bromo, to provide "haloalkoxy" or haloalkoxyalkyl radicals. More preferred haloalkoxy radicals are "lower haloalkoxy" radicals having one to six carbon atoms and one or more halo radicals. Examples of such radicals include fluoromethoxy, chloromethoxy, trifluoromethoxy, trifluoroethoxy, fluoroethoxy and fluoropropoxy. The term "aryl", alone or in combination, means a carbocyclic aromatic system containing one, two or three rings wherein such rings may be attached together in a pendent manner or may be fused. The term "aryl" embraces aromatic radicals such as phenyl, naphthyl, tetrahydronaphthyl, indane and biphenyl. The term "heterocyclic" embraces saturated, partially saturated and unsaturated heteroatom-containing ring-shaped radicals, where the heteroatoms may be selected from nitrogen, sulfur and oxygen. Preferred heterocyclic radicals contain 3 to 10 members. Examples of saturated heterocyclic radicals include saturated 3 to 6-membered heteromonocyclic group containing 1 to 4 nitrogen atoms [e.g. pyrrolidinyl, imidazolidinyl, piperidino, piperazinyl, etc.]; saturated 3 to 6-membered heteromonocyclic group containing 1 to 2 oxygen atoms and 1 to 3 nitrogen atoms

[e.g. morpholinyl, etc.]; saturated 3 to 6-membered heteromonocyclic group containing 1 to 2 sulfur atoms and 1 to 3 nitrogen atoms [e.g., thiazolidinyl, etc.]. Examples of partially saturated heterocyclic radicals 5 include dihydrothiophene, dihydropyran, dihydrofuran and dihydrothiazole. Examples of unsaturated heterocyclic radicals, also termed "heteroaryl" radicals, include unsaturated 3 to 6 membered heteromonocyclic group containing 1 to 4 nitrogen atoms, for example, pyrrolyl, 10 pyrrolinyl, imidazolyl, pyrazolyl, pyridyl, pyrimidinyl, pyrazinyl, pyridazinyl, triazolyl [e.g., 4H-1,2,4-triazolyl, 1H-1,2,3-triazolyl, 2H-1,2,3-triazolyl, etc.] tetrazolyl [e.g. 1H-tetrazolyl, 2H-tetrazolyl, etc.], etc.; unsaturated condensed heterocyclic group 15 containing 1 to 5 nitrogen atoms, for example, indolyl, isoindolyl, indolizinyl, benzimidazolyl, quinolyl, isoquinolyl, indazolyl, benzotriazolyl, tetrazolopyridazinyl [e.g., tetrazolo[1,5-b]pyridazinyl, etc.], etc.; unsaturated 3 to 6-membered 20 heteromonocyclic group containing an oxygen atom, for example, pyranyl, furyl, etc.; unsaturated 3 to 6-membered heteromonocyclic group containing a sulfur atom, for example, thienyl, etc.; unsaturated 3- to 6-membered heteromonocyclic group containing 1 to 2 oxygen 25 atoms and 1 to 3 nitrogen atoms, for example, oxazolyl, isoxazolyl, oxadiazolyl [e.g., 1,2,4-oxadiazolyl, 1,3,4-oxadiazolyl, 1,2,5-oxadiazolyl, etc.] etc.; unsaturated condensed heterocyclic group containing 1 to 2 oxygen atoms and 1 to 3 nitrogen atoms [e.g. benzoxazolyl, 30 benzoxadiazolyl, etc.]; unsaturated 3 to 6-membered heteromonocyclic group containing 1 to 2 sulfur atoms and 1 to 3 nitrogen atoms, for example, thiazolyl, thiadiazolyl [e.g., 1,2,4-thiadiazolyl, 1,3,4-thiadiazolyl, 1,2,5-thiadiazolyl, etc.] and 35 isothiazolyl; unsaturated condensed heterocyclic group containing 1 to 2 sulfur atoms and 1 to 3 nitrogen atoms [e.g., benzothiazolyl, benzothiadiazolyl, etc.] and the

like. The term also embraces radicals where heterocyclic radicals are fused with aryl radicals. Examples of such fused bicyclic radicals include benzofuryl, benzothienyl, and the like. Said "heterocyclic" radicals 5 may have 1 to 3 substituents such as lower alkyl, hydroxy, oxo, amino and lower alkylamino. More preferred heteroaryl radicals include five to six membered heteroaryl radicals. The term "alkylthio" embraces radicals containing a linear or branched alkyl radical, of one to about ten carbon atoms attached to a divalent sulfur atom. More preferred alkylthio radicals 10 are "lower alkylthio" radicals having alkyl radicals of one to six carbon atoms. Examples of such lower alkylthio radicals are methylthio, ethylthio, 15 propylthio, butylthio and hexylthio. The term "alkylthioalkyl" embraces alkylthio radicals attached to an alkyl radical. More preferred alkylthioalkyl radicals are "lower alkylthioalkyl" radicals having alkyl radicals of one to six carbon atoms and an 20 alkylthio radical as described above. Examples of such radicals include methylthiomethyl. The term "arylthio" embraces radicals containing an aryl radical, attached to a divalent sulfur atom, such as a phenylthio radical. The term "alkylsulfinyl" embraces radicals containing a 25 linear or branched alkyl radical, of one to ten carbon atoms, attached to a divalent $-S(=O)-$ radical. More preferred alkylsulfinyl radicals are "lower alkylsulfinyl" radicals having one to six carbon atoms. Examples of such lower alkylsulfinyl radicals include 30 methylsulfinyl, ethylsulfinyl, butylsulfinyl and hexylsulfinyl. The term "alkylsulfinylalkyl" embraces alkylsulfinyl radicals attached to an alkyl radical, where alkyl and alkylsulfinyl are defined as above. More preferred alkylsulfinylalkyl radicals are "lower 35 alkylsulfinylalkyl" radicals having one to six carbon atoms. Examples of such lower alkylsulfinylalkyl radicals include methylsulfinylmethyl. The term

"sulfonyl", whether used alone or linked to other terms such as alkylsulfonyl, denote s respectively divalent radicals $-SO_2-$. "Alkylsulfonyl" embraces alkyl radicals attached to a sulfonyl radical, where alkyl is defined 5 as above. More preferred alkylsulfonyl radicals are "lower alkylsulfonyl" radicals having one to six carbon atoms. Examples of such lower alkylsulfonyl radicals include methylsulfonyl, ethylsulfonyl and propylsulfonyl. The term "alkylsulfonylalkyl" embraces 10 alkylsulfonyl radicals attached to an alkyl radical, where alkyl and alkylsulfonyl are defined as above. More preferred alkylsulfonylalkyl radicals are "lower alkylsulfonylalkyl" radicals having one to six carbon atoms. Examples of such lower alkylsulfonylalkyl 15 radicals include methylsulfonylmethyl, ethylsulfonylmethyl and propylsulfonylmethyl. The term "arylsulfonyl" embraces aryl radicals as defined above, attached to a sulfonyl radical. Examples of such radicals include phenylsulfonyl. The terms "sulfamyl", 20 "aminosulfonyl" and "sulfonamidyl" whether alone or used with terms such as "N-alkylaminosulfonyl", "N-arylamino- 25 sulfonyl", "N,N-dialkylaminosulfonyl" and "N-alkyl-N-arylamino- sulfonyl", denote a sulfonyl radical substituted with an amine radical, forming a sulfonamide (-SO₂NH₂). The terms "N-alkylaminosulfonyl" and "N,N-dialkylaminosulfonyl" denote aminosulfonyl radicals substituted, respectively, with one alkyl radical, a 30 cycloalkyl ring, or two alkyl radicals. The terms "N-arylamino- sulfonyl" and "N-alkyl-N-arylamino- sulfonyl" denote aminosulfonyl radicals substituted with one aryl radical or one alkyl and one aryl radical, respectively. The term "acyl" denotes a radical provided by the residue after removal of hydroxyl from an organic acid. Examples of such acyl radicals include formyl, alkanoyl 35 and aroyl radicals. The terms "carboxy" or "carboxyl", whether used alone or with other terms, such as "carboxyalkyl", denotes -CO₂H. The term "carbonyl",

whether used alone or with other terms, such as "alkoxycarbonyl", denotes -(C=O)-. The term "alkoxycarbonyl" means a radical containing an alkoxy radical, as defined above, attached via an oxygen atom to a carbonyl radical. Preferably, "lower alkoxy carbonyl" embraces alkoxy radicals having one to six carbon atoms. Examples of such "lower alkoxy carbonyl" ester radicals include substituted or unsubstituted methoxycarbonyl, ethoxycarbonyl, propoxycarbonyl, butoxycarbonyl and hexyloxycarbonyl.

The term "alkylcarbonyl" includes radicals having alkyl radicals attached to a carbonyl radical. More preferred alkylcarbonyl radicals are "lower alkylcarbonyl" radicals having one to six carbon atoms. Examples of such radicals include methylcarbonyl and ethylcarbonyl.

The term "alkylcarbonylalkyl" denotes radicals having alkylcarbonyl attached to alkyl radicals as defined above. More preferred alkylcarbonylalkyl radicals are "lower alkylcarbonylalkyl" radicals having alkyl radicals of one to six carbon atoms. Examples of such radicals include methylcarbonylmethyl and ethylcarbonylmethyl. The term "alkoxycarbonylalkyl" embraces radicals having "alkoxycarbonyl", as defined above substituted to an alkyl radical. More preferred alkoxy carbonylalkyl radicals are "lower alkoxy carbonylalkyl" having lower alkoxy carbonyl radicals as defined above attached to one to six carbon atoms. Examples of such lower alkoxy carbonylalkyl radicals include methoxycarbonylmethyl. The term "carboxyalkyl" embraces radicals having a carboxy radical as defined above, attached to an alkyl radical. More preferred carboxyalkyl radicals are "lower carboxyalkyl" having alkyl portions of one to six carbons. The term "aminoalkyl" embraces alkyl radicals substituted with amino radicals. More preferred aminoalkyl radicals are "lower aminoalkyl" having one to six carbon atoms. Examples include aminomethyl,

aminoethyl and aminobutyl. The term "alkylaminoalkyl" embraces aminoalkyl radicals having the nitrogen atom substituted with at least one alkyl radical. More preferred alkylaminoalkyl radicals are "lower alkylaminoalkyl" having one to six carbon atoms attached to a lower aminoalkyl radical as described above. The term "alkylamino" denotes amino groups which have been substituted with one or two alkyl radicals. More preferred alkylamino radicals are "lower alkylamino" radicals having alkyl radicals of one to six carbon atoms, attached to a nitrogen atom. Suitable "lower alkylamino" may be mono or dialkylamino such as N-methylamino, N-ethylamino, N,N-dimethylamino, N,N-diethylamino or the like. The term "alkylaminocarbonyl" embraces alkylamino radicals, as described above, to a carbonyl radical. More preferred alkylaminocarbonyl radicals are "lower alkylaminocarbonyl" having lower alkylamino radicals, as described above, attached to a carbonyl radical. Examples of such radicals include N-methylaminocarbonyl and N,N-dimethylcarbonyl. The terms "N-monoarylaminocarbonyl" and "N-alkyl-N-arylaminocarbonyl" denote aminocarbonyl radicals substituted, respectively, with one aryl radical, and one alkyl and one aryl radical. The term "arylmino" denotes amino groups which have been substituted with one or two aryl radicals, such as N-phenylamino. The "arylmino" radicals may be further substituted on the aryl ring portion of the radical. The term "aminocarbonyl" denotes an amide group of the formula $-C(=O)NH_2$. The term "aminocarbonylalkyl" denotes an aminocarbonyl radical attached to an alkyl radical, as defined above. The term "amidino" denotes an $-C(=NH)-NH_2$ radical. The term "cyanoamidino" denotes an $-C(=N-CN)-NH_2$ radical. The term "cycloalkyl" embraces radicals having three to ten carbon atoms, such as cyclopropyl cyclobutyl, cyclopentyl, cyclohexyl and cycloheptyl. The term "acylamino" embraces an amino

radical substituted with an acyl group. An examples of an "acylamino" radical is acetylarnino ($\text{CH}_3\text{C}(=\text{O})\text{-NH-}$).

The present invention comprises a pharmaceutical composition comprising a therapeutically-effective amount of a compound of Formula I in association with at least one pharmaceutically-acceptable carrier, adjuvant or diluent.

The present invention also comprises a method of treating inflammation or inflammation-associated disorders in a subject, the method comprising administering to the subject having such inflammation or disorder a therapeutically-effective amount of a compound of Formula I.

Compounds of Formula I would also be capable of inhibiting cytokines, such as TNF, IL-1, IL-6, and IL-8. As such, the compounds can be used in the manufacture of a medicament or in a method for the treatment for the prophylactic or therapeutic treatment of diseases mediated by cytokines, such as TNF, IL-1, IL-6, and IL-8.

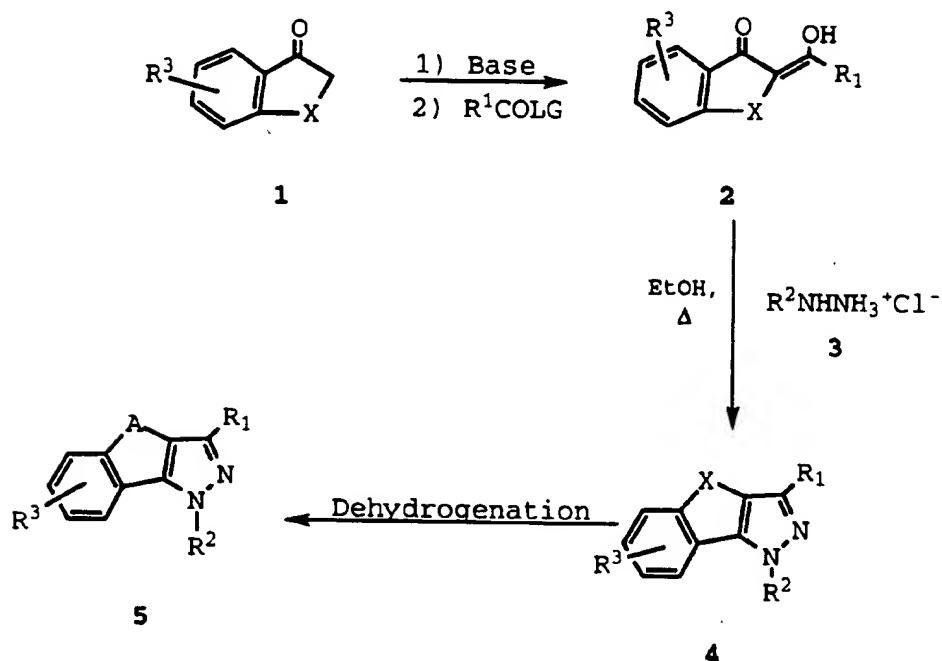

Also included in the family of compounds of Formula I are the pharmaceutically-acceptable salts thereof. The term "pharmaceutically-acceptable salts" embraces salts commonly used to form alkali metal salts and to form addition salts of free acids or free bases. The nature of the salt is not critical, provided that it is pharmaceutically-acceptable. Suitable pharmaceutically-acceptable acid addition salts of compounds of Formula I may be prepared from an inorganic acid or from an organic acid. Examples of such inorganic acids are hydrochloric, hydrobromic, hydroiodic, nitric, carbonic, sulfuric and phosphoric acid. Appropriate organic acids may be selected from aliphatic, cycloaliphatic, aromatic, araliphatic, heterocyclic, carboxylic and sulfonic classes of organic acids, example of which are formic, acetic, propionic, succinic, glycolic, gluconic, lactic, malic, tartaric, citric, ascorbic, glucuronic, maleic,

fumaric, pyruvic, aspartic, glutamic, benzoic, anthranilic, mesylic, salicylic, *p*-hydroxybenzoic, phenylacetic, mandelic, embonic (pamoic), methanesulfonic, ethanesulfonic, benzenesulfonic, 5 pantothenic, toluenesulfonic, 2-hydroxyethanesulfonic, sulfanilic, stearic, cyclohexylaminosulfonic, algenic, β -hydroxybutyric, salicylic, galactaric and galacturonic acid. Suitable pharmaceutically-acceptable base addition salts of compounds of Formula I include metallic salts made from aluminum, calcium, lithium, magnesium, potassium, sodium and zinc or organic salts made from N,N'-dibenzylethylenediamine, chloroprocaine, choline, diethanolamine, ethylenediamine, meglumine (N-methylglucamine) and 10 procaine. All of these salts may be prepared by conventional means from the corresponding compound of Formula I by reacting, for example, the appropriate acid or base with the compound of Formula I.

GENERAL SYNTHETIC PROCEDURES

The compounds of the invention can be synthesized according to the following procedures of Schemes I-VI, 5 wherein the R¹-R³ substituents are as defined for Formula I-II, above, except where further noted.

Scheme I

10

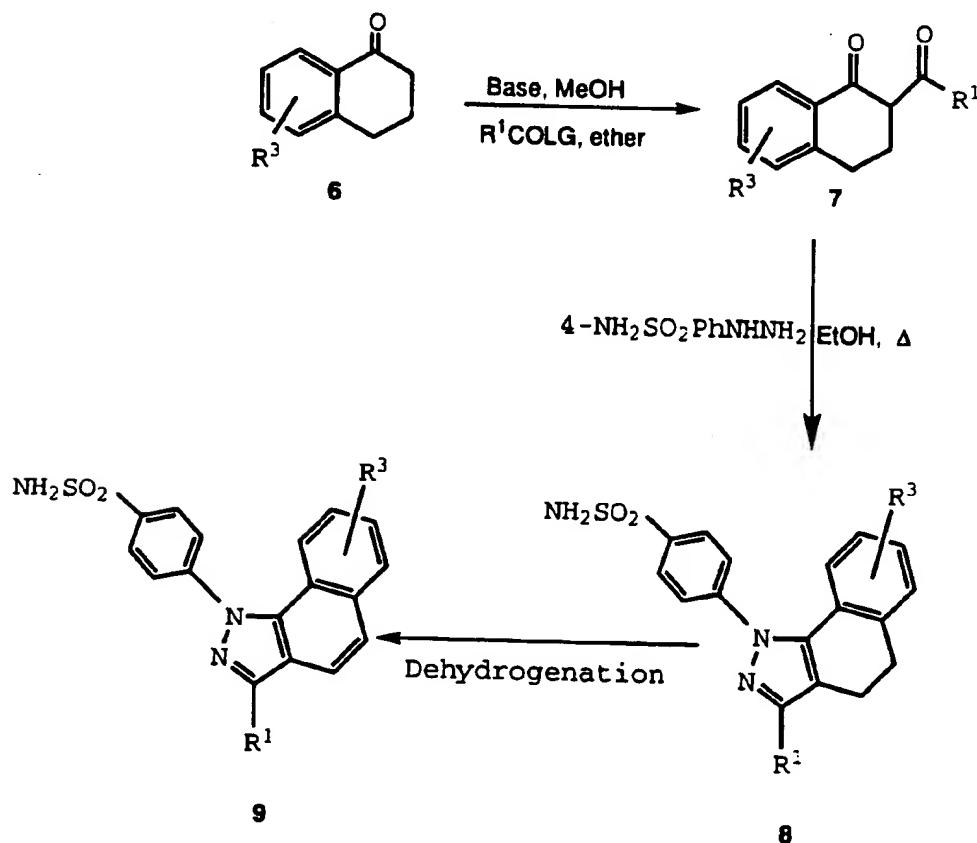

Synthetic Scheme I shows the three step procedure for preparation of fused pyrazole compounds embraced by Formula I. In step 1, a ketone 1 (where X is (CH₂)₂₋₄) is reacted with base, such as a lithium base, for example lithium diisopropyl amide (LDA) or LiHMDS, or sodium methoxide (25%) in a protic solvent, such as methanol, followed by condensation with suitable acylating agents R¹COLG (where LG represents an appropriate leaving group such as methoxy, ethoxy, chloro, imidazole, tosyl and the like), such as ethyl trifluoroacetate, in an appropriate solvent such as diethyl ether, methanol or tetrahydrofuran, to give the intermediate diketone 2 (in the enol form). In 15

20

step 2, the diketone **2** in an anhydrous protic solvent, such as absolute ethanol or acetic acid, is treated with the free base or hydrochloride salt of a phenylhydrazine **3** at reflux for about 24 hours to afford the fused pyrazole **4**. In step 3, the fused pyrazole **4** is treated with a dehydrogenating agent such as 2,3-dichloro-5,6-dicyano-1,4-benzoquinone (DDQ). Additional agent can be periodically added to give the partially unsaturated antiinflammatory compounds **5** of this invention. Dehydrogenation simultaneous with halogenation can be achieved by reacting the dihydro fused pyrazole **4** with N-chlorosuccinimide (NCS) and heating to about 50°C for several days.

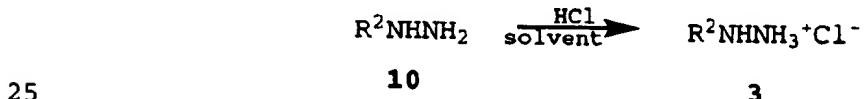

15

Scheme II

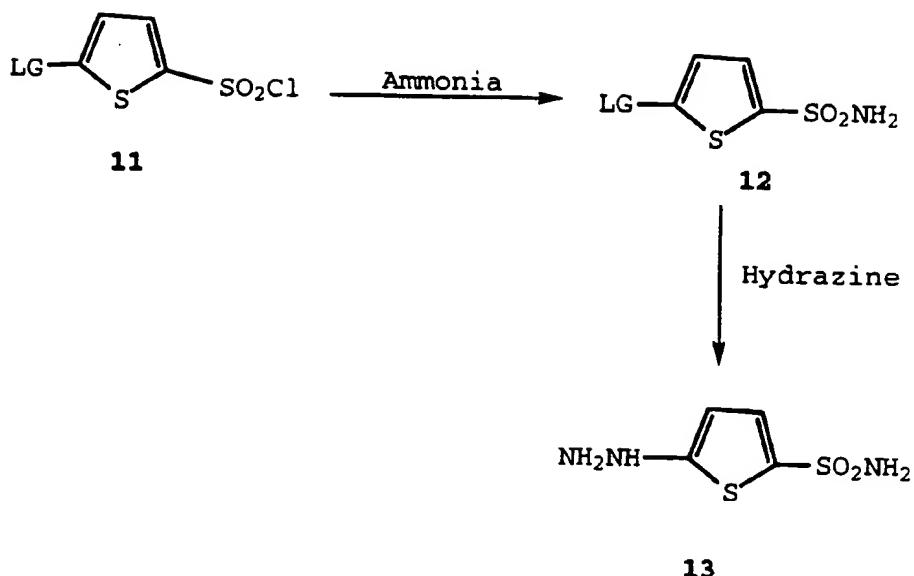

Synthetic Scheme II shows the three step procedure for preparation of benz[g]indazole compounds 9 embraced by Formula I. In step 1, 1-tetralone derivatives 6 are reacted with base, such as lithium 5 diisopropyl amide (LDA) or sodium methoxide (25%) in a protic solvent, such as methanol, followed by condensation with suitable acylating agents R^1COLG (where LG is defined for Scheme I) such as ethyl trifluoroacetate in an appropriate solvent such as 10 diethyl ether, methanol or tetrahydrofuran to give the intermediate diketones 7. In step 2, the diketones 7 in an anhydrous protic solvent, such as absolute ethanol or acetic acid, are treated with the free base or hydrochloride salt of a phenylhydrazine at reflux 15 for 24 hours to afford the 4,5-dihydro-benz[g]indazoles 8. In step 3, the 4,5-dihydro-benz[g]indazoles 8 are reacted with DDQ or N-chlorosuccinimide (NCS) and heated to an appropriate 20 temperature. Additional reagent can be periodically added to give the antiinflammatory compounds 9 of this invention.

SCHEME III

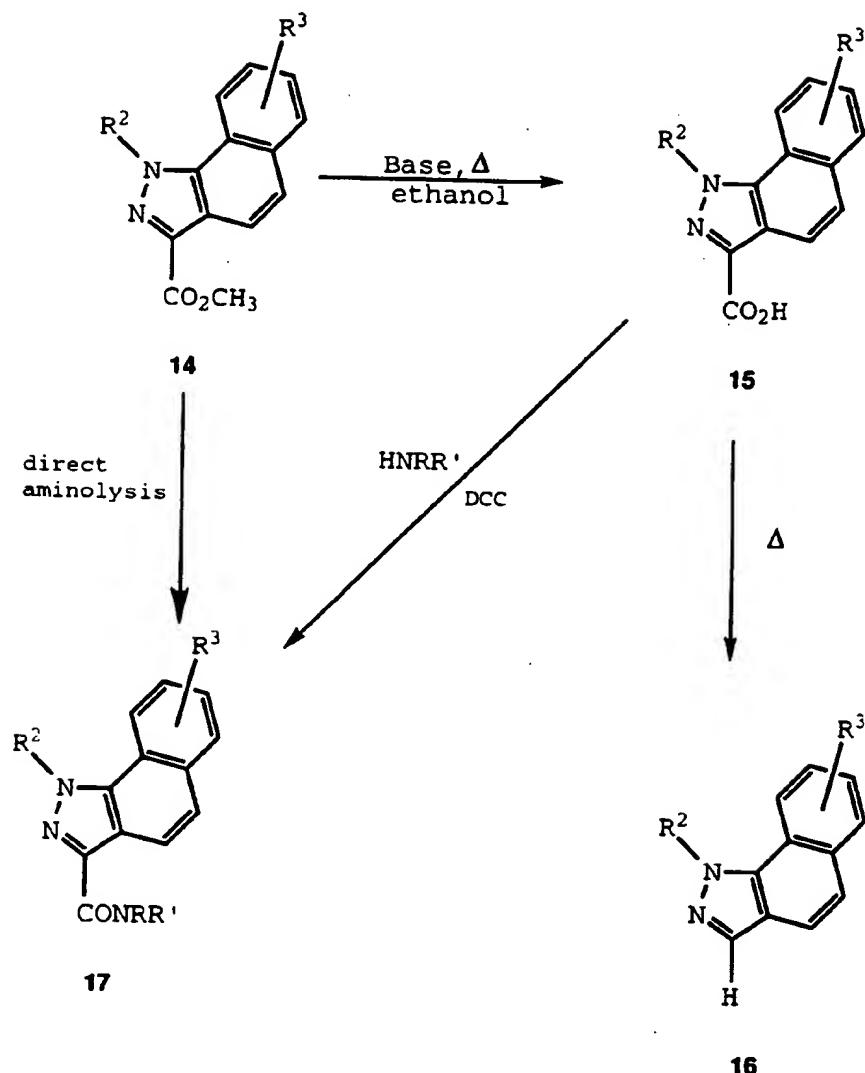

Synthetic Scheme III illustrates a procedure used to prepare the substituted phenylhydrazine hydrochlorides 3 as used in Schemes I-II. The 30 substituted phenylhydrazine is converted to the hydrochloride salt by stirring with a 4N solution of hydrochloric acid in a solvent such as dioxane.

SCHEME IV

5 Synthetic Scheme IV shows the two step procedure
 for preparation of substituted heteroarylhydrazine
 compounds 13 as used in Scheme I where R² is thienyl.
 In step 1, the heteroarylthionyl chloride 11 (where
 LG represents a leaving group such as halo) is treated
 10 with ammonia to give the heteroaryl sulfonamides 12.
 In step 2, the heteroaryl sulfonamides 12 are treated
 with hydrazine to give the substituted
 heteroarylhydrazines 13.

SCHEME V

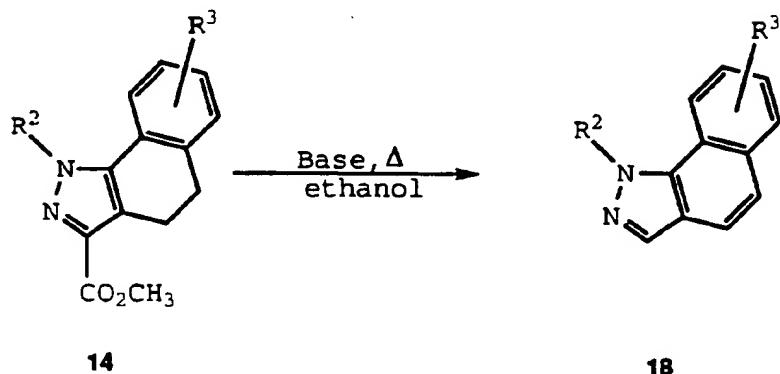

5 Synthetic Scheme V shows procedures for preparing antiinflammatory agents 15, 16 and 17 of Formula I. The esters 14, which can be prepared as shown in Scheme I, are dissolved in aqueous ethanol and a base such as 10% NaOH is added. The reaction is
 10 heated to reflux to give the acids 15. The acids 15 can be decarboxylated to the fused pyrazole 16 by heating to about 290°C. The acids 15 can be converted to the appropriate amides 17 by dissolving in methanol and treating with an appropriate amine in

the presence of a coupling agent such as dicyclohexylcarbodiimide (DCC). The amides 17 can also be prepared directly from esters 14 by treating with an appropriate amine.

5

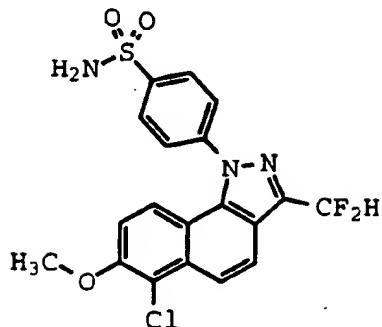

SCHEME VI

10 Synthetic Scheme VI shows procedures for
preparing antiinflammatory agents 18 of Formula I. The
dihydrobenzindazole esters 14, which can be prepared
similar to that shown in Scheme I and as shown in
Hamilton, *J.Heterocyclic Chem.*, **13**, 545 (1976), are
15 dissolved in ethanol and a base such as 10% NaOH is
added. The reaction is heated to reflux to give the
decarboxylated agents 18.

The following examples contain detailed descriptions of the methods of preparation of compounds of Formula I-II. These detailed descriptions fall within the scope, and serve to exemplify, the above described General Synthetic Procedures which form part of the invention. These detailed descriptions are presented for illustrative purposes only and are not intended as a restriction on the scope of the invention. All parts are by weight and temperatures are in Degrees centigrade unless otherwise indicated.

Example 1

5 **4-[6-Chloro-3-(difluoromethyl)-7-methoxy-1H-
benz[g]indazol-1-yl]benzenesulfonamide**

10 **Step 1 Preparation of 2-[2,2-difluoro-1-
hydroxyethylidene]-3,4-dihydro-6-methoxy-1(2H)-
naphthalenone**

15 Ethyl difluoroacetate (6.2 g, 50 mmol) was dissolved in 75 mL of ether. To this solution was added 12 mL of 25% sodium methoxide in methanol (52.5 mmol). A solution of 6-methoxy-1-tetralone (8.81 g, 50 mmol) in 125 mL of ether was added over about 1 minute. The reaction mixture was stirred at room temperature for 14 hours and was diluted with 150 mL of 1N HCl. The phases were separated and the organic layer was washed with brine, dried over anhydrous MgSO_4 , filtered and concentrated in vacuo. The residue was taken up in 70 mL of boiling ethanol/water and cooled to room temperature, whereupon crystals of 2-[2,2-difluoro-1-hydroxyethylidene]-3,4-dihydro-6-methoxy-1(2H)-naphthalenone (also known as 6-methoxy-2-difluoroacetyl-1-tetralone) formed which were isolated by filtration and air dried (10.8 g, 85%): mp 52-54°C.

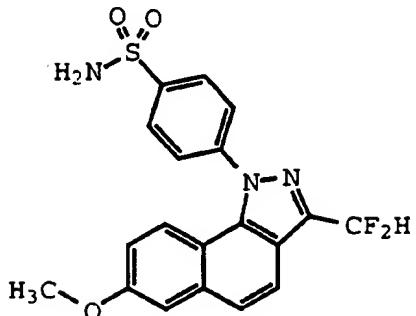

20 **Step 2 Preparation of 4-[3-(difluoromethyl)-4,5-
dihydro-7-methoxy-1H-benz[g]indazol-1-
yl]benzenesulfonamide**

3,4-Dihydro-6-methoxy-2-[2,2-difluoro-1-hydroxyethylidene]-1(2H)-naphthalenone from Step 1 (2.54 g, 10 mmol) was added to 4-sulfonamidophenylhydrazine hydrochloride (2.91 g, 13 mmol) and 250 mL of absolute ethanol. The solution was warmed to reflux for 15 hours and concentrated *in vacuo*. The residue was dissolved in ethyl acetate, washed with water and with brine, dried over anhydrous MgSO₄, filtered and reconcentrated *in vacuo*. The residue was recrystallized from a mixture of ethanol and water to give 4-[3-(difluoromethyl)-4,5-dihydro-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide (3.3 g, 82%): mp 256-257°C.

Step 3 Preparation of 4-[6-chloro-3-(difluoromethyl)-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide

4-[3-(Difluoromethyl)-4,5-dihydro-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide (1.0 g, 1.23 mmol) from Step 2 was suspended in chloroform (100 ml), and N-chlorosuccinimide (NCS) (329 mg, 1.23 mmol) was added. The reaction was heated to 50°C for 16 hours. At this point, ethanol (20 ml) was added to dissolve the suspended reagents. The reaction was again heated to 50°C for 24 hours. An additional equivalent of NCS (329 mg) was added, and the reaction was heated to 50°C for an additional 4 days. Upon cooling, a precipitate which had formed was collected. This solid was pure 4-[6-chloro-3-(difluoromethyl)-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide (350 mg, 65%): ¹H NMR (acetone *d*₆) δ = 4.0 (s, 3H), 7.2 (t, 1H, *j* = 54.0 Hz), 7.3 (d, 1H *j* = 9.3 Hz), 7.6 (d, 1H *j* = 9.3 Hz), 7.9 (d, 2H *j* = 8.7 Hz), 8.0 (d, 1H *j* = 9.3 Hz), 8.1 (d, 1H *j* = 9.3 Hz), 8.2 (d, 2H *j* = 8.7 Hz); ¹⁹F NMR (acetone *d*₆) δ -113.5 ppm (d, 2F).

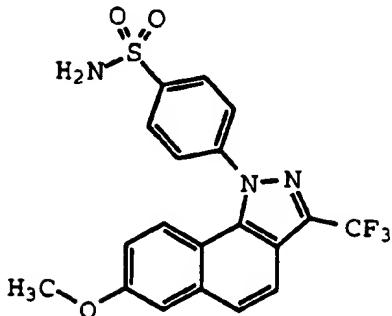

Example 2

5 4-[3-(Difluoromethyl)-7-methoxy-
1H-benz[g]indazol-1-yl]benzenesulfonamide

4-[3-(Difluoromethyl)-4,5-dihydro-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide (Example 1, Step 10 2) (600 mg, 1.5 mmol) was dissolved in 1,4-dioxane (200 ml), and 2,3-dichloro-5,6-dicyano-1,4-benzoquinone (DDQ) (341 mg, 1.5 mmol) was added. The reaction was heated to reflux for 16 hours, a second equivalent of DDQ (340 mg, 1.5 mmol) was added and the reaction was heated to 15 reflux for an additional 24 hours. At three successive 24 hour intervals, 1.5 mmol additional DDQ was added and heating continued until no starting material was left (as determined by thin layer chromatography). The reaction was cooled to room temperature, at which time 20 most of the hydroquinone by-product precipitated. The reaction was filtered and concentrated. The residue was chromatographed on silica gel eluting with 50% ethyl acetate in hexane to yield 4-[3-(difluoromethyl)-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide (514 mg, 85 %): ^1H NMR (acetone d_6) δ = 3.9 (s, 3H), 7.05 (m, 1H), 7.2 (t, 1H j = 54.0 Hz), 7.5 (m, 2H), 7.7 (m, 1H), 7.9 (m, 3H), 8.2 (d, 2H, j = 8.7 Hz); ^{19}F NMR (acetone d_6) δ -113.3 ppm (d, 2F).

Example 3

5 4-[7-Methoxy-3-(trifluoromethyl)-
1H-benz[g]indazol-1-yl]benzenesulfonamide

10 Step 1 Preparation of 3,4-dihydro-6-methoxy-2-
[2,2,2-trifluoro-1-hydroxyethylidene]-1(2H)-
naphthalenone

15 6-Methoxytetralone (16.06 g, 91 mmol) was dissolved in ether (150 mL) and tetrahydrofuran (THF) (25 mL), and treated with ethyl trifluoroacetate (14.69 g, 103 mmol) and a sodium methoxide solution (25% in methanol, 24.44 g, 113 mmol). The reaction was stirred for 67.2 hours at room temperature, then treated with 3N HCl (40 mL). The organic layer was collected, washed with brine, dried over MgSO₄, and concentrated in vacuo to give a brown solid which was recrystallized from ethanol/water to give the diketone as orange needles (19.67 g, 79%): mp 77-79°C; ¹H NMR (CDCl₃) 300 MHz 16.01 (br s, 1H) 7.93 (d, J=8.9 Hz, 1H) 6.87 (dd, J=8.7 Hz J=2.6 Hz, 1H) 6.73 (d, J=2.4 Hz, 1H) 3.87 (s, 3H) 2.86 (m, 2H) 2.74 (m, 2H); ¹⁹F NMR (CDCl₃) 300 MHz -71.38 (s). Mass Spectrum M⁺ = 273.0688

20 Step 2 Preparation of 4-[4,5-dihydro-7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide

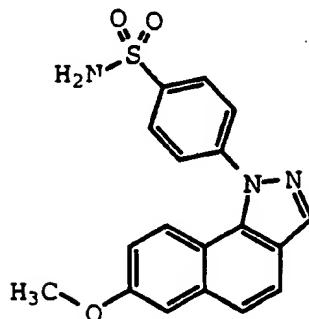

25 4-Sulfonamidophenylhydrazine hydrochloride (4.35 g, 19.4 mmol) was added to a stirred solution of 3,4-

dihydro-6-methoxy-2-[2,2,2-trifluoro-1-hydroxyethylidene]-1(2H)-naphthalenone from Step 1 (5.06 g, 18.6 mmol) in ethanol (100 mL). The reaction was heated to reflux and stirred for 16 hours. The reaction 5 mixture was filtered and washed with ethanol to give the desired pyrazole as a white solid (6.97 g, 88%): mp 277-278°C; ¹H NMR (acetone d_6) 300 MHz 8.09 (d, J =8.7 Hz, 2H) 7.80 (d, J =8.9 Hz, 2H) 7.00 (d, J =2.6 Hz, 1H) 6.78 (m, 3H) 6.69 (dd, J =8.7 Hz J =2.6 Hz, 1H) 3.81 (s, 3H) 10 3.04 (m, 2H) 2.84 (m, 2H); ¹⁹F NMR (acetone d_6) 300 MHz -62.43 (s). Mass Spectrum M^+ = 423.0838.

Step 3 Preparation of 4-[7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide

4-[4,5-Dihydro-7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide from Step 2 (1.27 g, 3.0 mmol) was dissolved in 1,4-dioxane (200 ml), and DDQ (681 mg, 3.0 mmol) was added. The reaction was 20 heated to reflux for 16 hours at which time a second equivalent of DDQ (681 mg, 3.0 mmol) was added and the reaction was heated to reflux for an additional 24 hours. At three successive 24 hour intervals, 3.0 mmol additional DDQ was added and heating continued until no 25 starting material was left (as determined by thin layer chromatography). The reaction was cooled to room temperature at which time most of the hydroquinone by-product precipitated. The reaction was filtered and concentrated. The residue was chromatographed on silica 30 gel eluting with 50% ethyl acetate in hexane to yield 4-[7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide (1.1 g, 87%): ¹H NMR (acetone d_6) δ = 3.9 (s, 3H), 6.9 (broad s, 2H) 7.1 (m, 1H), 7.6 (m, 2H), 7.8 (m, 2H), 8.0 (d, 2H j = 8.7 Hz), 8.2 (d, 2H j = 8.7 Hz); ¹⁹F NMR (acetone d_6) δ -61.8 ppm (s, 3F).

Example 4

5 4-[7-Methoxy-1H-benz[g]indazol-1-
y1]benzenesulfonamide

Step 1. Preparation of 2-carbomethoxy-6-methoxy-1-tetralone.

10 A solution of 6-methoxy-1-tetralone (10.0 g, 0.057 mol) and dimethyl oxalate (7.37 g, 0.062 mol) in 100 mL of methanol was treated with a solution of 25% sodium methoxide in methanol. The solution was stirred at room temperature for 16 hours. The dark 15 mixture was treated with 60 mL of 6 N hydrochloric acid, whereupon a precipitate formed that was isolated by filtration and air dried to provide 8.65 g (58%) of 2-carbomethoxy-6-methoxy-1-tetralone that was judged to be of sufficient purity to take onto 20 the next step without further purification: ^1H NMR ($\text{CDCl}_3/300$ MHz) 7.99 (1H, d, $J=8.66$ Hz), 6.87 (1H, dd, $J=8.66$, 2.42 Hz), 6.72 (1H, d, $J=2.42$ Hz), 3.91 (3H, s), 3.88 (3H, s), 2.97 (2H, m), 2.86 (2H, m).

25 Step 2. Preparation of 4,5-dihydro-meth-1-[3-carbomethoxy]-1H-benz[g]indazol-1-ylbenzenesulfonamide.

30 A solution of 2-carbomethoxy-6-methoxy-1-tetralone from Step 1 (6.00 g, 22.9 mmol) in 30 mL of anhydrous methanol was warmed to reflux and treated with 4-sulfonamidophenylhydrazine

hydrochloride (5.63 g, 25.2 mmol). The solution was maintained at reflux for 14 hours and cooled to room temperature, whereupon the desired pyrazole separated from solution, was isolated by filtration

5 and air dried to afford 8.29 g (88%) of 4,5-dihydro-4-[3-(carbomethoxy)-1H-benz[g]indazol-1-yl]benzenesulfonamide: ^1H NMR (CDCl_3 /300 MHz) 7.96 (2H, d, $J=8.66$ Hz), 7.59 (2H, d, $J=8.66$ Hz), 6.78 (1H, d, $J=2.62$ Hz), 6.71 (1H, d, $J=8.66$ Hz), 6.49 (1H, dd, $J=8.66$, 2.62 Hz), 6.43 (2H, s), 3.86 (3H, s), 3.70 (3H, s), 2.97 - 2.97 (4H, m). Mass spectrum $M+\text{H} = 414$. Anal. Calc'd. for $\text{C}_{20}\text{H}_{19}\text{N}_3\text{O}_5\text{S}$: C, 58.1; H, 4.63; N, 10.16; S, 7.75. Found: C, 58.20; H, 4.59; N, 10.19; S, 7.69.

15

Step 3. Preparation of 4,5-dihydro-7-methoxy-4-[3-(carboxy)-1H-benz[g]indazol-1-yl]benzenesulfonamide.

A solution of 4,5-dihydro-4-[3-(carbomethoxy)-1H-benz[g]indazol-1-yl]benzenesulfonamide from Step 2 (3.00 g, 7.26 mmol) in 25 mL of dioxane was treated with 2.5 N sodium hydroxide (7.3 mL, 18.1 mmol) and 5 mL of water. The solution was warmed to reflux and after 1 hour the solution was cooled to room temperature and acidified by the addition of excess 6 N hydrochloric acid. The acid separated as a white solid and was isolated by filtration and air dried to provide 2.41 g (83%) of pure acid that was used directly in the next step: ^1H NMR (CD_3OD):

20 8.09 (2H, d, $J=8.66$ Hz), 7.74 (2H, d, $J=8.66$ Hz), 6.96 (1H, d, $J=2.62$ Hz), 6.70 (1H, d, $J=8.66$ Hz), 6.60 (1H, dd, $J=8.66$, 2.62 Hz), 3.78 (3H, s), 3.01 (4H, s). Mass spectrum $M+\text{H} = 400$.

30

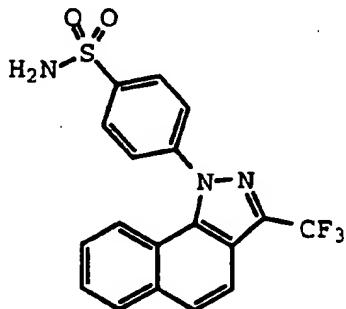

35 Step 4. Preparation of 4-[7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide.

4,5-Dihydro-4-[3-(carboxy)-1H-benz[g]indazol-1-yl]benzenesulfonamide from Step 3 (1.00 g, 2.5 mmol)

was heated to 295°C for 0.5 hour. The residue was dissolved in a small amount of ethyl acetate and purified by flash chromatography, eluting with 40% ethyl acetate in hexane to give 4-[7-methoxy-1H-5 benz[g]indazol-1-yl]benzenesulfonamide as a white solid (200 mg, 20%): ^1H NMR (CD_3OD): 8.28 (1H, s), 8.18 (2H, d, $J=8.66$ Hz), 7.81 (1H, s), 7.77 (2H, d, $J=8.66$ Hz), 7.59 (1H, d, $J=8.86$ Hz), 7.52 (1H, d, $J=9.27$ Hz), 7.46 (1H, d, $J=2.62$ Hz), 7.0 (1H, dd, $J=9.27$, 2.62 Hz), 3.91 (3H, s). Mass spectrum $\text{M}+\text{H} = 354$. Anal. Calc'd. for $\text{C}_{18}\text{H}_{15}\text{N}_3\text{O}_3\text{S}$: C, 61.18; H, 4.28; N, 11.89; S, 9.07. Found: C, 60.93; H, 4.23; N, 11.73; S, 8.93.

15

Example 5

20 **4-[3-(Trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide**

Step 1 Preparation of 3,4-dihydro-2-[2,2,2-trifluoro-1-hydroxyethylidene]-1(2H)-naphthalenone

To a solution of ethyl trifluoroacetate (28.4 g, 0.2 mol) and 75 mL of ether was added 48 mL of 25% sodium methoxide in methanol (0.21 mol). A solution of 1-tetralone (29.2 g, 0.2 mol) in ether (50 mL) was added over about 5 minutes. The reaction mixture was stirred at room temperature for 14 hours and was diluted with 100 mL of 3N HCl. The phases were separated, and the organic layer was washed with 3N HCl and with brine,

dried over anhydrous $MgSO_4$, filtered and concentrated *in vacuo*. The residue was taken up in 70 mL of boiling ethanol/water and cooled to room temperature, whereupon crystals of 3,4-dihydro-2-[2,2,2-trifluoro-1-hydroxyethylidene]-1(2H)-naphthalenone formed which were isolated by filtration and air dried to give 32 g (81%) of pure 3,4-dihydro-2-[2,2,2-trifluoro-1-hydroxyethylidene]-1(2H)-naphthalenone: mp 48-49°C; 1H NMR ($CDCl_3$) δ 2.8 (m, 2H), 2.9 (m, 2H), 7.2 (d, j = 3.0 Hz, 1H), 7.36 (m, 1H), 7.50 (m, 1H), 7.98 (m, 1H); ^{19}F NMR ($CDCl_3$) δ -72.0. EI GC-MS $M^+ = 242$.

Step 2 Preparation of 4,5-dihydro-4-[3-(trifluoromethyl)-1H-benz[glindazol-1-yl]benzenesulfonamide

3,4-Dihydro-2-[2,2,2-trifluoro-1-hydroxyethylidene]-1(2H)-naphthalenone from Step 1 (1.21 g, 5.0 mmol) was added to 4-sulfonamidophenylhydrazine hydrochloride (1.12 g, 5.0 mmol) and 25 mL of absolute ethanol. The solution was warmed to reflux for 15 hours, cooled and concentrated *in vacuo*. The residue was dissolved in ethyl acetate, washed with water and with brine, dried over anhydrous $MgSO_4$, filtered and reconcentrated *in vacuo*. The residue was recrystallized from a mixture of ethyl acetate and isooctane to give 1.4 g (71%) of pure 4,5-dihydro-4-[3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide: mp 257-258°C; 1H NMR ($CDCl_3/CD_3OD$, 4:1) δ 2.7 (m, 2H), 2.9 (m, 2H), 6.6 (m, 1H), 6.9 (m, 1H), 7.1 (m, 1H), 7.16 (m, 1H), 7.53 (m, 2H), 7.92 (m, 2H); ^{19}F NMR $CDCl_3$ δ -62.5. FAB-MS $M^+H = 394$.

Step 3 Preparation of 4-[3-(trifluoromethyl)-1H-benz[glindazol-1-yl]benzenesulfonamide

4,5-Dihydro-4-[3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide from Step 2 (393 mg, 1.0 mmol) was dissolved in 1,4-dioxane (50 mL), and 2,3-dichloro-5,6-dicyano-1,4-benzoquinone (DDQ) (227 mg,

1.0 mmol) was added. The reaction was heated to reflux for 16 hours at which time a second equivalent of DDQ (227 mg, 1.0 mmol) was added and the reaction was heated to reflux for an additional 24 hours. At three 5 successive 24 hour intervals, 1.0 mmol additional DDQ was added and heating continued until no starting material was left. The reaction was cooled to room temperature at which time most of the hydroquinone by-product precipitated. The reaction was filtered and 10 concentrated. The residue was chromatographed on silica gel eluting with 50% ethyl acetate in hexane to yield 4-[3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide (352 mg, 90%): ^1H NMR (acetone d_6) δ = 6.89 (broad s, 2H), 7.5 (m, 1H), 7.7 (m, 2H), 15 7.89 (s, 2H), 8.0 (d, 2H, j = 8.7 Hz), 8.15 (d, 1H, j = 8.3 Hz), 8.3 (d, 2H, j = 8.7 Hz); ^{19}F NMR (acetone d_6) δ = -61.7 ppm (s, 3F).

BIOLOGICAL EVALUATION

20

Rat Carrageenan Foot Pad Edema Test

The carrageenan foot edema test was performed with materials, reagents and procedures essentially as described by Winter, et al., (*Proc. Soc. Exp. Biol. Med.*, 111, 544 (1962)). Male Sprague-Dawley rats were selected in each group so that the average body weight was as close as possible. Rats were fasted with free access to water for over sixteen hours prior to the test. The rats were dosed orally (1 mL) with compounds 25 suspended in vehicle containing 0.5% methylcellulose and 0.025% surfactant, or with vehicle alone. One hour 30 later a subplantar injection of 0.1 mL of 1% solution of carrageenan/sterile 0.9% saline was administered and the volume of the injected foot was measured with a 35 displacement plethysmometer connected to a pressure transducer with a digital indicator. Three hours after the injection of the carrageenan, the volume of the foot was again measured. The average foot swelling in a

group of drug-treated animals was compared with that of a group of placebo-treated animals and the percentage inhibition of edema was determined (Otterness and Bliven, *Laboratory Models for Testing NSAIDs, in Non-steroidal Anti-Inflammatory Drugs*, (J. Lombardino, ed. 1985)). The % inhibition shows the % decrease from control paw volume determined in this procedure and the data for selected compounds in this invention are summarized in Table I.

2	24

20

1- @ 30 mg/kg body weightEvaluation of COX-1 and COX-2 activity *in vitro*

The compounds of this invention exhibited inhibition *in vitro* of COX-2. The COX-2 inhibition activity of the 25 compounds of this invention illustrated in the Examples was determined by the following methods.

a. Preparation of recombinant COX baculoviruses

A 2.0 kb fragment containing the coding region of 30 either human or murine COX-1 or human or murine COX-2 was cloned into a BamH1 site of the baculovirus transfer vector pVL1393 (Invitrogen) to generate the baculovirus transfer vectors for COX-1 and COX-2 in a manner similar to the method of D.R. O'Reilly et al (*Baculovirus Expression Vectors: A Laboratory Manual* (1992)). Recombinant baculoviruses were isolated by transfecting 4 µg of baculovirus transfer vector DNA into SF9 insect 35 cells (2x10⁸) along with 200 ng of linearized

baculovirus plasmid DNA by the calcium phosphate method. See M.D. Summers and G.E. Smith, *A Manual of Methods for Baculovirus Vectors and Insect Cell Culture Procedures*, Texas Agric. Exp. Station Bull. 1555 (1987).

- 5 Recombinant viruses were purified by three rounds of plaque purification and high titer (10E7 - 10E8 pfu/ml) stocks of virus were prepared. For large scale production, SF9 insect cells were infected in 10 liter fermentors (0.5 x 10⁶/ml) with the recombinant
- 10 baculovirus stock such that the multiplicity of infection was 0.1. After 72 hours the cells were centrifuged and the cell pellet homogenized in Tris/Sucrose (50 mM: 25%, pH 8.0) containing 1% 3-[(3-cholamidopropyl)dimethylammonio] -1-propanesulfonate (CHAPS). The homogenate was centrifuged at 10,000xG for 30 minutes, and the resultant supernatant was stored at -80°C before being assayed for COX activity.

b. Assay for COX-1 and COX-2 activity:

- 20 COX activity was assayed as PGE₂ formed/μg protein/time using an ELISA to detect the prostaglandin released. CHAPS-solubilized insect cell membranes containing the appropriate COX enzyme were incubated in a potassium phosphate buffer (50 mM, pH 8.0) containing
- 25 epinephrine, phenol, and heme with the addition of arachidonic acid (10 μM). Compounds were pre-incubated with the enzyme for 10-20 minutes prior to the addition of arachidonic acid. Any reaction between the arachidonic acid and the enzyme was stopped after ten
- 30 minutes at 37°C/room temperature by transferring 40 μl of reaction mix into 160 μl ELISA buffer and 25 μM indomethacin. The PGE₂ formed was measured by standard ELISA technology (Cayman Chemical). Results are shown in Table II.

Biological paradigms for testing the cytokine-inhibiting activity of these compounds are found in WO95/13067, published 18 May 1995.

15 Also embraced within this invention is a class of pharmaceutical compositions comprising the active compounds of this combination therapy in association with one or more non-toxic, pharmaceutically-acceptable carriers and/or diluents and/or adjuvants (collectively referred to herein as "carrier" materials) and, if desired, other active ingredients. The active compounds of the present invention may be administered by any suitable route, preferably in the form of a pharmaceutical composition adapted to such a route, and

20 in a dose effective for the treatment intended. The active compounds and composition may, for example, be administered orally, intravascularly, intraperitoneally, subcutaneously, intramuscularly or topically.

25

For oral administration, the pharmaceutical composition may be in the form of, for example, a tablet, capsule, suspension or liquid. The pharmaceutical composition is preferably made in the form of a dosage unit containing a particular amount of the active ingredient. Examples of such dosage units are tablets or capsules. The active ingredient may also be administered by injection as a composition wherein, for example, saline, dextrose or water may be used as a suitable carrier.

30

35

The amount of therapeutically active compounds that are administered and the dosage regimen for treating a disease condition with the compounds and/or compositions of this invention depends on a variety of factors, 5 including the age, weight, sex and medical condition of the subject, the severity of the disease, the route and frequency of administration, and the particular compound employed, and thus may vary widely. The pharmaceutical compositions may contain active ingredients in the range 10 of about 0.1 to 2000 mg, preferably in the range of about 0.5 to 500 mg and most preferably between about 1 and 100 mg. A daily dose of about 0.01 to 100 mg/kg body weight, preferably between about 0.5 and about 20 mg/kg body weight and most preferably between about 0.1 to 10 mg/kg 15 body weight, may be appropriate. The daily dose can be administered in one to four doses per day.

In the case of psoriasis and other skin conditions, it may be preferable to apply a topical preparation of compounds of this invention to the affected area two to 20 four times a day.

For inflammations of the eye or other external tissues, e.g., mouth and skin, the formulations are preferably applied as a topical ointment or cream, or as a suppository, containing the active ingredients in a 25 total amount of, for example, 0.075 to 30% w/w, preferably 0.2 to 20% w/w and most preferably 0.4 to 15% w/w. When formulated in an ointment, the active ingredients may be employed with either paraffinic or a water-miscible ointment base. Alternatively, the active 30 ingredients may be formulated in a cream with an oil-in-water cream base. If desired, the aqueous phase of the cream base may include, for example at least 30% w/w of a polyhydric alcohol such as propylene glycol, butane-1,3-diol, mannitol, sorbitol, glycerol, polyethylene glycol 35 and mixtures thereof. The topical formulation may desirably include a compound which enhances absorption or penetration of the active ingredient through the skin or other affected areas. Examples of such dermal

penetration enhancers include dimethylsulfoxide and related analogs. The compounds of this invention can also be administered by a transdermal device. Preferably topical administration will be accomplished using a patch 5 either of the reservoir and porous membrane type or of a solid matrix variety. In either case, the active agent is delivered continuously from the reservoir or microcapsules through a membrane into the active agent permeable adhesive, which is in contact with the skin or 10 mucosa of the recipient. If the active agent is absorbed through the skin, a controlled and predetermined flow of the active agent is administered to the recipient. In the case of microcapsules, the encapsulating agent may also function as the membrane.

15 The oily phase of the emulsions of this invention may be constituted from known ingredients in a known manner. While the phase may comprise merely an emulsifier, it may comprise a mixture of at least one emulsifier with a fat or an oil or with both a fat and an 20 oil. Preferably, a hydrophilic emulsifier is included together with a lipophilic emulsifier which acts as a stabilizer. It is also preferred to include both an oil and a fat. Together, the emulsifier(s) with or without stabilizer(s) make-up the so-called emulsifying wax, and 25 the wax together with the oil and fat make up the so-called emulsifying ointment base which forms the oily dispersed phase of the cream formulations. Emulsifiers and emulsion stabilizers suitable for use in the formulation of the present invention include Tween 60, 30 Span 80, cetostearyl alcohol, myristyl alcohol, glyceryl monostearate, and sodium lauryl sulfate, among others.

The choice of suitable oils or fats for the formulation is based on achieving the desired cosmetic properties, since the solubility of the active compound 35 in most oils likely to be used in pharmaceutical emulsion formulations is very low. Thus, the cream should preferably be a non-greasy, non-staining and washable product with suitable consistency to avoid leakage from

tubes or other containers. Straight or branched chain, mono- or dibasic alkyl esters such as di-isoadipate, isocetyl stearate, propylene glycol diester of coconut fatty acids, isopropyl myristate, decyl oleate, isopropyl 5 palmitate, butyl stearate, 2-ethylhexyl palmitate or a blend of branched chain esters may be used. These may be used alone or in combination depending on the properties required. Alternatively, high melting point lipids such as white soft paraffin and/or liquid paraffin or other 10 mineral oils can be used.

Formulations suitable for topical administration to the eye also include eye drops wherein the active ingredients are dissolved or suspended in suitable carrier, especially an aqueous solvent for the active 15 ingredients. The antiinflammatory active ingredients are preferably present in such formulations in a concentration of 0.5 to 20%, advantageously 0.5 to 10% and particularly about 1.5% w/w.

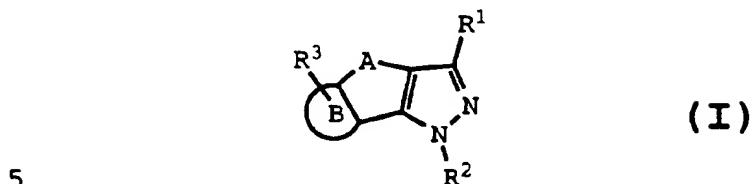

For therapeutic purposes, the active compounds of 20 this combination invention are ordinarily combined with one or more adjuvants appropriate to the indicated route of administration. If administered *per os*, the compounds may be admixed with lactose, sucrose, starch powder, cellulose esters of alkanoic acids, cellulose 25 alkyl esters, talc, stearic acid, magnesium stearate, magnesium oxide, sodium and calcium salts of phosphoric and sulfuric acids, gelatin, acacia gum, sodium alginate, polyvinylpyrrolidone, and/or polyvinyl alcohol, and then tableted or encapsulated for convenient administration. 30 Such capsules or tablets may contain a controlled-release formula~~on~~ as may be provided in a dispersion of active compou~~n~~ in hydroxypropylmethyl cellulose. Formulations for parenteral administration may be in the form of aqueous or non-aqueous isotonic sterile injection 35 solutions or suspensions. These solutions and suspensions may be prepared from sterile powders or granules having one or more of the carriers or diluents mentioned for use in the formulations for oral

administration. The compounds may be dissolved in water, polyethylene glycol, propylene glycol, ethanol, corn oil, cottonseed oil, peanut oil, sesame oil, benzyl alcohol, sodium chloride, and/or various buffers. Other adjuvants and modes of administration are well and widely known in the pharmaceutical art.

5 Although this invention has been described with respect to specific embodiments, the details of these embodiments are not to be construed as limitations.

What is claimed is:

1. A compound of Formula I

wherein A is $-(CH_2)_m-CH=CH-(CH_2)_n-$;

wherein m is 0 or 1;

wherein n is 0 or 1;

10 wherein B is selected from aryl and heteroaryl;

wherein R¹ is selected from hydrido, halo, haloalkyl, cyano, nitro, formyl, alkoxy carbonyl, carboxyl, carboxyalkyl, alkoxy carbonylalkyl, amidino, cyanoamidino, aminocarbonyl, alkoxy, alkoxyalkyl,

15 aminocarbonylalkyl, N-monoalkylaminocarbonyl, N-monoarylaminocarbonyl, N,N-dialkylaminocarbonyl, N-alkyl-N-arylaminocarbonyl, alkylcarbonyl, alkylcarbonylalkyl, hydroxyalkyl, alkylthio, alkylsulfinyl, alkylsulfonyl, alkylthioalkyl,

20 alkylsulfinylalkyl, alkylsulfonylalkyl, N-alkylaminosulfonyl, N-arylaminosulfonyl, arylsulfonyl, N,N-dialkylaminosulfonyl, N-alkyl-N-arylaminosulfonyl, and heterocyclic;

wherein R² is selected from aryl and heteroaryl,

25 wherein R² is optionally substituted at a substitutable position with one or more radicals selected from alkylsulfonyl, aminosulfonyl, halo, alkyl, alkoxy, hydroxyl, and haloalkyl; and

wherein R³ is one or more radicals selected from

30 hydrido, halo, alkyl, alkylthio, alkylsulfinyl, alkylsulfonyl, cyano, carboxyl, alkoxy carbonyl, aminocarbonyl, N-monoalkylaminocarbonyl, N-monoarylaminocarbonyl, N,N-dialkylaminocarbonyl, N-alkyl-N-arylaminocarbonyl, haloalkyl, hydroxyl,

alkoxy, hydroxyalkyl, haloalkoxy, aminosulfonyl, N-alkylaminosulfonyl, amino, N-alkylamino, N,N-dialkylamino, heterocyclic, nitro, and acylamino;

provided R² is substituted when R³ is halo;

5 or a pharmaceutically-acceptable salt thereof.

2. Compound of Claim 1 wherein A is -(CH₂)_m-CH=CH-(CH₂)_n-; wherein B is selected from aryl, five and six membered heteroaryl; wherein m is 0 or 1;

10 wherein n is 0 or 1; wherein R¹ is selected from halo, lower haloalkyl, cyano, nitro, formyl, lower alkoxy carbonyl, lower carboxyalkyl, lower alkoxy carbonylalkyl, amidino, cyanoamidino, lower alkoxy, lower alkoxyalkyl, lower aminocarbonylalkyl,

15 lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower alkylcarbonyl, lower alkylcarbonylalkyl, lower hydroxyalkyl, lower alkylthio, lower alkylsulfinyl,

20 lower alkylsulfonyl, lower alkylthioalkyl, lower alkylsulfinylalkyl, lower alkylsulfonylalkyl, lower N-alkylaminosulfonyl, N-phenylaminosulfonyl, phenylsulfonyl, lower N,N-dialkylaminosulfonyl, lower N-alkyl-N-phenylaminosulfonyl and five-seven membered

25 heterocyclic; wherein R² is selected from phenyl and five or six membered heteroaryl, wherein R² is optionally substituted at a substitutable position with one or more radicals selected from lower alkylsulfonyl, aminosulfonyl, hydrido, halo, lower

30 alkyl, lower alkoxy, hydroxyl and lower haloalkyl; and wherein R³ is one or more radicals selected from halo, lower alkylthio, lower alkylsulfinyl, lower alkyl, lower alkylsulfonyl, cyano, carboxyl, lower alkoxy carbonyl, aminocarbonyl, lower N-

35 monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower haloalkyl, hydroxyl, lower

alkoxy, lower hydroxyalkyl, lower haloalkoxy, aminosulfonyl, lower N-alkylaminosulfonyl, amino, lower N-alkylamino, lower N,N-dialkylamino, five-seven membered heterocyclic, nitro and acylamino; or 5 a pharmaceutically-acceptable salt thereof.

3. Compound of Claim 2 wherein A is -CH=CH-; wherein B is selected from aryl and six membered heteroaryl; wherein R¹ is selected from halo, lower 10 haloalkyl, cyano, nitro, formyl, lower alkoxy carbonyl, lower carboxyalkyl, lower alkoxy, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower alkylcarbonyl and lower hydroxyalkyl; wherein R² is 15 phenyl substituted at a substitutable position with a radical selected from lower alkylsulfonyl and aminosulfonyl; and wherein R³ is one or more radicals selected from halo, lower alkylthio, lower 20 alkylsulfinyl, lower alkyl, lower alkylsulfonyl, cyano, carboxyl, lower alkoxy carbonyl, aminocarbonyl, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower N,N-dialkylaminocarbonyl, lower N-alkyl-N-phenylaminocarbonyl, lower haloalkyl, 25 hydroxyl, lower alkoxy, lower hydroxyalkyl, lower haloalkoxy, amino, lower N-alkylamino, lower N,N-dialkylamino, nitro and acylamino; or a pharmaceutically-acceptable salt thereof.

4. Compound of Claim 3 wherein A is -CH=CH-; wherein B is phenyl or pyridyl; wherein R¹ is selected from lower haloalkyl, cyano, lower alkoxy carbonyl, lower hydroxyalkyl, lower N-monoalkylaminocarbonyl, N-phenylaminocarbonyl, lower 30 N,N-dialkylaminocarbonyl and lower N-alkyl-N-phenylaminocarbonyl; wherein R² is phenyl substituted at a substitutable position with a radical selected 35

from lower alkylsulfonyl and aminosulfonyl; and wherein R³ is one or more radicals selected from halo, lower alkylthio, lower alkylsulfinyl, lower alkyl, cyano, lower alkoxy carbonyl, aminocarbonyl, 5 lower N-monoalkylaminocarbonyl, lower haloalkyl, hydroxyl, lower alkoxy, lower hydroxyalkyl, lower haloalkoxy, amino, lower N,N-dialkylamino and nitro; or a pharmaceutically-acceptable salt thereof.

10 5. Compound of Claim 4 wherein A is -CH=CH-; wherein R¹ is selected from fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, pentafluoroethyl, heptafluoropropyl, difluorochloromethyl, 15 dichlorofluoromethyl, difluoroethyl, difluoropropyl, dichloroethyl, dichloropropyl, cyano, hydroxymethyl, methoxycarbonyl, ethoxycarbonyl, isopropoxycarbonyl, tert-butoxycarbonyl, propoxycarbonyl, butoxycarbonyl, isobutoxycarbonyl, pentoxy carbonyl, N- 20 methylaminocarbonyl, N-phenylaminocarbonyl, N,N-dimethylaminocarbonyl and N-methyl-N-phenylaminocarbonyl; wherein R² is phenyl substituted at a substitutable position with methylsulfonyl or aminosulfonyl; and wherein R³ is one or more radicals 25 selected from fluoro, chloro, bromo, methylthio, ethylthio, isopropylthio, tert-butylthio, isobutylthio, hexylthio, methylsulfinyl, ethylsulfinyl, isopropylsulfinyl, tert-butylsulfinyl, isobutylsulfinyl, hexylsulfinyl, methyl, ethyl, 30 isopropyl, tert-butyl, isobutyl, hexyl, cyano, methoxycarbonyl, ethoxycarbonyl, isopropoxycarbonyl, tert-butoxycarbonyl, propoxycarbonyl, butoxycarbonyl, isobutoxycarbonyl, pentoxy carbonyl, aminocarbonyl, N-methylaminocarbonyl, fluoromethyl, difluoromethyl, 35 trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, pentafluoroethyl, heptafluoropropyl, difluorochloromethyl, dichlorofluoromethyl,

difluoroethyl, difluoropropyl, dichloroethyl, dichloropropyl, hydroxyl, methoxy, methylenedioxy, ethoxy, propoxy, n-butoxy, hydroxymethyl, trifluoromethoxy, amino, N,N-dimethylamino and nitro;

5 or a pharmaceutically-acceptable salt thereof.

6. Compound of Claim 5 selected from compounds, and their pharmaceutically acceptable salts, of the group consisting of

10

4-[6-chloro-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide; [1-(4-aminosulfonylphenyl)-6-chloro-7-methoxy-1H-benz[g]indazol-3-yl]carbonitrile;

15

methyl [1-(4-aminosulfonylphenyl)-6-chloro-7-methoxy-1H-benz[g]indazol-3-yl]carboxylate; N-methyl [1-(4-aminosulfonylphenyl)-6-chloro-7-methoxy-1H-benz[g]indazol-3-yl]carboxamide; 6-chloro-7-methoxy-1-(4-methylsulfonylphenyl)-1H-

20

benz[g]indazole;

[1-(4-methylsulfonylphenyl)-6-chloro-7-methoxy-1H-benz[g]indazol-3-yl]carbonitrile;

ethyl [1-(4-methylsulfonylphenyl)-6-chloro-7-methoxy-1H-benz[g]indazol-3-yl]carboxylate;

25

N-methyl [1-(4-methylsulfonylphenyl)-6-chloro-7-methoxy-1H-benz[g]indazol-3-yl]carboxamide;

7-chloro-3-(difluoromethyl)-1-(4-

methylsulfonylphenyl)-1H-benz[g]indazole;

3-(difluoromethyl)-7-fluoro-1-(4-

methylsulfonylphenyl)-1H-benz[g]indazole;

3-(difluoromethyl)-7-methoxy-1-(4-

methylsulfonylphenyl)-1H-benz[g]indazole;

30

3-(difluoromethyl)-6,7-methylenedioxy-1-(4-

methylsulfonylphenyl)-1H-benz[g]indazole;

35

3-(difluoromethyl)-6,7-methylenedioxy-1-(4-

methylsulfonylphenyl)-1H-benz[g]indazole;

3-(difluoromethyl)-6-fluoro-7-methoxy-1-(4-methylsulfonylphenyl)-1H-benz[g]indazole;
6-chloro-3-(difluoromethyl)-7-fluoro-1-(4-methylsulfonylphenyl)-1H-benz[g]indazole;
5 6-chloro-3-(difluoromethyl)-7-methyl-1-(4-methylsulfonylphenyl)-1H-benz[g]indazole;
3-(difluoromethyl)-6-fluoro-7-methyl-1-(4-methylsulfonylphenyl)-1H-benz[g]indazole;
6,7-dichloro-3-(difluoromethyl)-1-(4-methylsulfonylphenyl)-1H-benz[g]indazole;
10 6,7-difluoro-3-(difluoromethyl)-1-(4-methylsulfonylphenyl)-1H-benz[g]indazole;
[1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazol-7-yl]carboxylic acid;
15 methyl [1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazol-7-yl]carboxylate;
7-chloro-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
20 7-fluoro-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
7-methyl-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
7-methoxy-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
25 6,7-methylenedioxy-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
6-fluoro-7-methoxy-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
30 6-chloro-7-fluoro-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
6-chloro-7-methyl-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
6-fluoro-7-methyl-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
35 6,7-dichloro-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;

6,7-difluoro-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
6-chloro-1-(4-methylsulfonylphenyl)-7-methylthio-3-(trifluoromethyl)-1H-benz[g]indazole;
5 6-chloro-7-methylsulfinyl-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
6-chloro-7-methoxy-1-(4-methylsulfonylphenyl)-3-(trifluoromethyl)-1H-benz[g]indazole;
10 (1-(4-aminosulfonylphenyl)-3-(difluoromethyl)-1H-benz[g]indazol-7-yl)carboxylic acid;
methyl [1-(4-aminosulfonylphenyl)-3-(difluoromethyl)-1H-benz[g]indazol-7-yl]carboxylate;
15 [1-(4-aminosulfonylphenyl)-3-(difluoromethyl)-1H-benz[g]indazol-7-yl]carbonitrile;
4-[7-chloro-3-(difluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide;
4-[3-(difluoromethyl)-7-fluoro-1H-benz[g]indazol-1-yl]benzenesulfonamide;
20 4-[7-bromo-3-(difluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide;
4-[3-(difluoromethyl)-7-methyl-1H-benz[g]indazol-1-yl]benzenesulfonamide;
25 4-[3-(difluoromethyl)-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide;
4-[3-(difluoromethyl)-6,7-methylenedioxy-1H-benz[g]indazol-1-yl]benzenesulfonamide;
4-[3-(difluoromethyl)-6-fluoro-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide;
30 4-[6-chloro-3-(difluoromethyl)-7-fluoro-1H-benz[g]indazol-1-yl]benzenesulfonamide;
4-[6-chloro-3-(difluoromethyl)-7-methyl-1H-benz[g]indazol-1-yl]benzenesulfonamide;
35 4-[3-(difluoromethyl)-6-fluoro-7-methyl-1H-benz[g]indazol-1-yl]benzenesulfonamide;

4-[6,7-dichloro-3-(difluoromethyl)-1H-
benz[g]indazol-1-yl]benzenesulfonamide;
4-[6,7-difluoro-3-(difluoromethyl)-1H-
benz[g]indazol-1-yl]benzenesulfonamide;
5 4-[6-chloro-3-(difluoromethyl)-7-methylthio-1H-
benz[g]indazol-1-yl]benzenesulfonamide;
4-[6-chloro-3-(difluoromethyl)-7-methylsulfinyl-1H-
benz[g]indazol-1-yl]benzenesulfonamide;
[1-(4-aminosulfonylphenyl)-3-(trifluoromethyl)-1H-
10 benz[g]indazol-7-yl]carboxylic acid;
methyl [1-(4-aminosulfonylphenyl)-3-
(trifluoromethyl)-1H-benz[g]indazol-7-
yl]carboxylate;
[1-(4-aminosulfonylphenyl)-3-(trifluoromethyl)-1H-
15 benz[g]indazol-7-yl]carbonitrile;
4-[7-chloro-3-(trifluoromethyl)-1H-benz[g]indazol-
1-yl]benzenesulfonamide;
4-[7-fluoro-3-(trifluoromethyl)-1H-benz[g]indazol-

benz[g]indazol-1-yl]benzenesulfonamide;
4-[6-fluoro-7-methyl-3-(trifluoromethyl)-1H-
35 benz[g]indazol-1-yl]benzenesulfonamide;
4-[6,7-dichloro-3-(trifluoromethyl)-1H-
benz[g]indazol-1-yl]benzenesulfonamide;

4-[6,7-difluoro-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide;

4-[6-chloro-7-methylthio-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide;

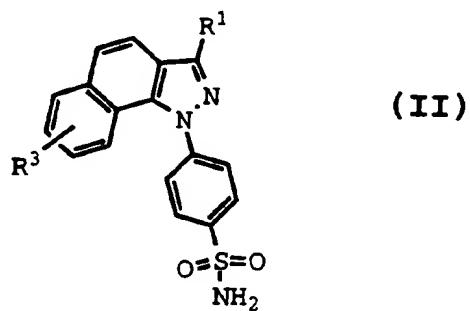

5 4-[6-chloro-7-methylsulfinyl-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide; and

4-[6-chloro-7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide.

10 7. Compound of Claim 5 which is 4-[6-chloro-7-methoxy-3-(trifluoromethyl)-1H-benz[g]indazol-1-yl]benzenesulfonamide, or a pharmaceutically-acceptable salt thereof.

15 8. Compound of Claim 5 which is 4-[3-(difluoromethyl)-7-methoxy-1H-benz[g]indazol-1-yl]benzenesulfonamide, or a pharmaceutically-acceptable salt thereof.

20 9. A compound of Formula II

25 wherein R¹ is hydrido or haloalkyl; and wherein R³ is one or more radicals selected from alkyl, alkoxy and halo; or a pharmaceutically-acceptable salt thereof.

30 10. Compound of Claim 9 wherein R¹ is hydrido or lower haloalkyl; and wherein R³ is one or more radicals selected from lower alkyl, lower alkoxy and halo; or a pharmaceutically-acceptable salt thereof.

11. Compound of Claim 10 wherein R^1 is selected from hydrido, fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, 5 trichloromethyl, pentafluoroethyl, heptafluoropropyl, difluorochloromethyl, dichlorofluoromethyl, difluoroethyl, difluoropropyl, dichloroethyl and dichloropropyl; and wherein R^3 is one or more radicals selected from fluoro, chloro, bromo, methyl, 10 ethyl, methoxy, methylenedioxy, ethoxy, propoxy, n-butoxy and tert-butoxy; or a pharmaceutically-acceptable salt thereof.

12. A pharmaceutical composition comprising a 15 therapeutically-effective amount of a compound, said compound selected from a family of compounds of Claim 1, 2, 3, 4, 5, 6, 7, 8, or 9; or a pharmaceutically-acceptable salt thereof.

13. A method of treating inflammation or an 20 inflammation-associated disorder in a subject, said method comprising administering to the subject having or susceptible to said inflammation or inflammation-associated disorder, a therapeutically-effective amount 25 of a compound of Claim 1; further provided that R^3 is not hydrido when R^1 is trifluoromethyl; and further provided that R^1 is not hydrido when R^3 is a single methoxy radical; or a pharmaceutically-acceptable salt thereof.

14. A method of treating inflammation or an 30 inflammation-associated disorder in a subject, said method comprising administering to the subject having or susceptible to said inflammation or inflammation-associated disorder, a therapeutically-effective amount 35 of a compound of Claim 2, 3, 4, 5, 6, 7, 8, or 9; or a pharmaceutically-acceptable salt thereof.

15. The method of Claim 13 for use in treatment of inflammation.

16. The method of Claim 13 for use in treatment 5 of an inflammation-associated disorder.

17. The method of Claim 16 wherein the inflammation-associated disorder is arthritis.

10 18. The method of Claim 16 wherein the inflammation-associated disorder is pain.

19. The method of Claim 16 wherein the inflammation-associated disorder is fever.

INTERNATIONAL SEARCH REPORT

International Application No
PCT/US 95/11402

A. CLASSIFICATION OF SUBJECT MATTER
IPC 6 C07D231/54 A61K31/415

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 6 C07D

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	<p>CHEMICAL ABSTRACTS, vol. 113, no. 5, 30 July 1990, Columbus, Ohio, US; abstract no. 40087s, E. BECALLI ET AL. INTERNATIONAL SEARCH REPORTInternational application No.
PCT/US95/11402**Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)**

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. **Claims Nos.:**
because they relate to subject matter not required to be searched by this Authority, namely:
Altough claims 13-19 are directed to a method of treatment of (diagnostic method practised on) the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. **Claims Nos.:**
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. **Claims Nos.:**
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

The additional search fees were accompanied by the applicant's protest.

No protest accompanied the payment of additional search fees.
